

# LAWSON MCPHETRIDGE

FULL-STACK SOFTWARE ENGINEER

Detail-oriented developer. Passionate about UI/UX. My background in the automobile industry gives me the problem-solving mentality and communication skills to be an asset to any team.

## Projects

### Goosebumps React.js, CSS, Full-stack

A reinvention of the classic Goosebumps books. Dual repo full stack project. Fully hand made authentication service.

- Built the wireframes, created the design, and used my keen eye for detail to catch bugs.
- Refactored code to make it more readable.

### YouCal React, CSS

A calendar app for all of your needs. You can create a new calendar and share calendars with other members via their account name. Add yearly tasks and much more.

- Built in a week with a team of two with no external APIs.
- Organized the file structure to maintain navigable code.

### Barkle Vanilla Javascript, CSS, HTML

A local dog meet-up app in which users can chat real-time with other dog owners in the area, you can create a profile, sign in/out, and edit your avatar, name, and bio. Fully remote pair programming with a team of five developers.

- Played a crucial role in creating real-time chat rooms.
- Fully built out nav bar in vanilla javascript.
